

## ENGLISH SUMMARY D3.4

### D3.4 Course curriculum for a Training-of-trainers course

The training-of-trainers course addresses those who have comprehensive knowledge within the fields of construction and/or electrical/HVAC and are interested to supervise the web-based training Energibyggare. The supervisor's role is to be a trainer and go through the education with the participants, typical their colleagues. It is also to be the support person and ambassador for the education Energibyggare. It is the trainer that determines if the participants has passed the education and can thereafter add the skill Energibyggare to their ID06 competence database.

The training-of-trainers will take place at different locations spread over Sweden during 2016/2017 with about 50 occasions planned. It is a one-day education where the focus is to give the trainers the tools needed to be able to spread the education within the target group. The goal is that the trainers feel secure in the content of the education and the methods used to spread it. They should also be familiar with the administrative procedures needed around the education..
